OMEGA SHIELD  
PROTECTION

## Frequently Asked Questions

- **Does the film negatively affect the look of my car?**  
No! Omega-Shield™ protects your car against paint damage and keeps it in showroom condition year after year, while the film remains virtually invisible.
- **Can I wash and wax Omega-Shield™?**  
Yes, you can wash and wax your car just as if Omega-Shield™ weren't there. Our film actually loves wax! Only use synthetic wax types.
- **Will the paint of my car eventually fade in the sun?**  
Yes, Omega-Shield™ film is UV stable, but UV radiation still passes through. The advantage is that the paint will not fade unevenly and end up with 'two tones,' as can happen with other paint protection methods.
- **Can I have Omega-Shield™ removed again?**  
Yes. Omega-Shield™ features a patented acrylic adhesive layer that can be safely removed without residue, even years after application.
- **Can I install Omega-Shield™ myself?**  
We recommend not installing Omega-Shield™ yourself. To achieve 100% invisible, crystal-clear paint protection requires years of training by a professional installer.
- **How do I remove stains from Omega-Shield™ film?**  
See the maintenance guidelines on the mirror hanger included at delivery. Or download the maintenance sheet.
- **Is there a warranty on Omega-Shield™ products?**  
Yes. Omega-Shield™ Gloss comes with a lifetime warranty against UV aging, delamination, cracking and peeling. Visit the Omega-Shield™ website for more information about the warranty conditions or check the maintenance sheet.

Custom fit - Invisible - Lifetime warranty

# PROTECT YOUR VALUABLE POSSESSION

Don't wait until it's too late. Omega-Shield™ cannot repair damage that already exists. Make sure it never gets that far and insist on protecting your pride and joy from the very first mile!

You know the feeling: you're driving behind a truck or a car comes from the opposite direction and suddenly – ping! – stone chip. You check your windshield. Luckily, that's still intact. But there's a big chance a chip has landed in your paint... Such a shame for your beautiful (new) car. Because let's be honest: who wants to drive around in a car with a damaged, aged look?

### There's a solution!

By protecting your vehicle with invisible Omega-Shield™. This polyurethane film acts like a second skin and shields the paint and headlights against stone chips, scratches, and even light parking damage.

### How does it work?

Omega-Shield™ is a 193-micron thick, crystal-clear polyurethane film that looks invisible on car paint.

Because the film is elastic and virtually impenetrable, hard objects never reach the paint, keeping it intact.

Omega-Shield™ is applied by a specialist to the most vulnerable parts of the bodywork.

Despite the lifetime warranty, the film can later be removed without damaging the paint.

### What are the benefits?

- Crystal clear
- Virtually invisible
- Ultra-smooth and glossy like paint
- Self-healing properties: scratches disappear automatically
- Protects against stone chips, impacts, scratches, bird droppings, tree sap, dirt, etc.
- Does not yellow
- Removable
- Lifetime warranty
- Also available in matte

# PREVENT PAINT DAMAGE

**The biggest target for stone chips: the front**  
Unfortunately, one of the most beautiful parts of a car is also the most vulnerable to damage. How great is it that we can invisibly protect every bumper and hood against scratches and small stone chips? Omega-Shield takes care of it all.

**Shopping can be risky!**  
The supermarket parking lot can be a real battlefield between your car paint and shopping carts. An accident can happen in an instant. This can easily be prevented by protecting the paint with Omega-Shield™. Bumps and scrapes are absorbed, leaving the paint intact.

**A common problem**  
Every car owner knows it: scratches around the door handles. The solution is simple. Install Omega-Shield™ in the recess behind the handle and scratches will be a thing of the past.

**Damage from use**  
The number one annoyance for car owners is damage to the rear bumper. The dog jumping in without care or heavy groceries being lifted over the bumper... scratches happen quickly. By applying Omega-Shield™ to this risk area, all problems are solved.

**Motorcycles**  
Motorcyclists know the problem all too well: flying gravel and paint damage, even while the bike is parked in a busy street. With a crystal-clear, resilient protective layer, these irritations are permanently eliminated.

**Trains, metro and trams**  
Public transport vehicles are exposed to damage 24/7. With Omega-Shield™ applied to vulnerable areas, bumps, stone chips and friction are easily warded off by the crystal-clear film.

**Trucks and buses**  
These rolling business cards must always remain in top condition. Looks matter. But because of the low front end, they are particularly prone to road dirt and flying gravel. Prevent resprays and costly repairs by simply protecting the paint.

**Yachts**  
Protect the hull above the waterline, avoid damage to sensitive areas and prevent oxidation of stainless steel parts with Omega-Shield™.

**Dashboards**  
Give durable surfaces such as dashboards in cars and yachts an extra protective layer with Omega-Shield™, so scratches don't stand a chance.

**Endless applications**  
Valuable and vulnerable surfaces – such as interior parts of a boat or camper, a tabletop or a stainless steel railing – can easily be fitted with a crystal-clear Omega-Shield film layer. Scratches from bumps and friction are absorbed, while the surface remains in perfect condition.
