

Omega-Shield™ is more

As a manufacturer of premium protection film, we focus on protecting durable surfaces. Our product range is fully aligned with this. A professional OMEGA-SHIELD™ installer has everything needed to satisfy every customer 100% without compromise.

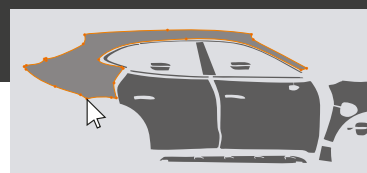

Different types

OMEGA-SHIELD™ not only offers the well-known gloss version, but also a special matte version. Why special? OMEGA-SHIELD™ MATTE has exactly the same matte "shine" as factory paints from brands such as Mercedes, Audi and BMW.

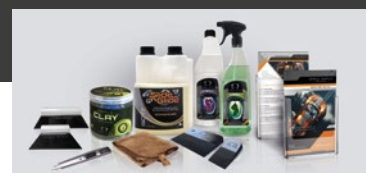

Digital patterns

The special SHAPE-CENTRAL software enables every installer to cut patterns for cars, motorcycles and more to size using a plotter.

Promotion, tools and more

We understand better than anyone how important proper back-up is. Brochures to boost sales, along with the right cleaning and installation materials, are essential to guarantee 100% customer satisfaction.

Why is this interesting for you?

Omega-Shield™ is a unique brand that offers solutions against paint damage from impacts, stone chips and scratches. Selling and installing Omega-Shield™ film is also highly profitable, thanks to the high profit margin and a customer base of both consumers and companies who are willing to invest in protection and quality. The investment costs are extremely low: no special equipment is required, except for a two-day professional training. And the risk of damage? There simply isn't any.

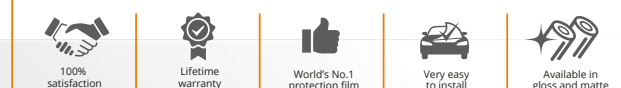

Become a dealer

It is easy to enter this market and become a dealer of the world's best protection film. Omega-Shield™ works exclusively with dealers and not directly with consumers. We focus entirely on development and production while providing support to our dealers. This way, we can dedicate our full attention to the product and remain the best in the world.

SPEED, STONE CHIPS AND IMPACTS: THE ENEMIES OF ANY INVESTMENT

Omega-Shield™: Market leader and preferred supplier

Omega-Shield™ is a market leader in protecting durable vehicle surfaces. Worldwide test results repeatedly prove that our products belong to the clearest, smoothest and strongest protection films on the market. That is why Omega-Shield™ has been successfully used for years on trucks, motorcycles, jet skis, boats, and more. Several manufacturers even have Omega-Shield™ factory-applied before delivery.

SELF-HEALING PROTECTION FILM

CUSTOM FIT | INVISIBLE | LIFETIME WARRANTY

Why paint protection?

Today's automotive paints are more complex and more vulnerable to damage than ever before. Due to advanced aerodynamics and body shapes, car paint has become more prone to stone chips. In addition, modern vehicles are often larger than their predecessors, while parking spaces have become smaller. Environmental influences, road surface damage and dirt constantly affect vehicle paintwork.

Thanks to Omega-Shield™ Surface Protection Film, vehicles maintain their pristine showroom condition, as it forms a nearly invisible barrier that resists stone chips and protects against scratches, bird droppings and insect stains. This ultimately protects the valuable investment and helps preserve the resale value of the vehicle.

What is Omega-Shield™?

Omega-Shield™ is a crystal-clear, soft and flexible polyurethane film with a self-adhesive layer that is applied to a surface. The film protects against damage caused by impacts, abrasion and stone chips. Because the film is fully transparent and does not distort the underlying surface, Omega-Shield™ is ideal for applications where valuable and high-end substrates need long-term and optimal protection, such as the paint of cars, motorcycles and boats.

What makes Omega-Shield™ different?

The differences are clear: **(1)** a glossy surface without orange peel, **(2)** elasticity up to 360%, **(3)** the ability to self-heal scratches within 10 minutes without heat, and **(4)** the possibility to endlessly reposition during installation without adhesive lines or marks. These properties make Omega-Shield™ a highly user-friendly and premium PPF film for every installer.

The best in its class: Omega-Shield™ GLOSS = lifetime warranty

The flagship of the Omega-Shield™ series is Omega-Shield™ GLOSS. By combining a patented clear topcoat with a proven aliphatic polyurethane resin, this product is the ideal protection film for any durable surface. Omega-Shield™ GLOSS combines excellent elasticity and unique optical clarity with outstanding resistance to chemicals, dirt, stone chips, impacts and abrasion.

It is also resistant to degradation from UV radiation, discoloration and cracking. Omega-Shield™ GLOSS is perfect for smooth surfaces such as automotive paint and easily conforms to convex and concave curves. With all these superior properties, it has been the world's best PPF film in its category for years. We are so confident in this that the GLOSS version comes with a LIFETIME WARRANTY*.

The multilayer structure of OMEGA-SHIELD™

Protective transport top layer

Removed during installation

Special Automatic Self-Healing top coat

Provides the unique gloss and protection

Aliphatic crystal-clear polyurethane resin

Durable soft and resilient 150 micron layer

Acrylic adhesive (repositionable)

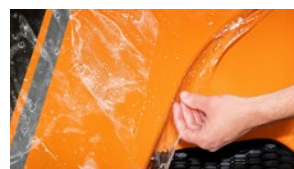

Crystal-clear adhesive layer that leaves no adhesive lines

Strong polyethylene liner

The plastic liner on which the film is supplied

Crystal-clear and flexible.

Effortless to install.

Light scratches in the PPF.

Scratches disappear automatically!

* A lifetime warranty may be granted provided certain conditions are met. Otherwise, the lifespan is 10 years. See the Installation and Guidelines sheet for more information.
